

## Planning Your Yoga Wall System is Easy!

The Great Yoga Wall system is designed around sheets of hardwood veneer plywood. Each sheet of plywood is 4 feet wide, eight feet tall and 3/4" (19mm) thick. The wood sections are installed end to end to make a continuous Yoga Wall as long as you like. Additional Yoga Wall sections can be added in the future to expand as your business grows. The Yoga Wall hardware is mounted in the **3/4" (19mm) plywood that you purchase from your local lumbar yard or hardware store**. Each section is 1 and 1/2 stations, or enough space for one and a half people. Two sections will provide you with 3 stations or Yoga Wall for 3 people. We recommend a veneered plywood of oak, birch or any wood of you like. You may choose other types of finish that fit your style. The table below will help you determine how much hardware you will need based on the length of Yoga Wall you wish to install. Just measure your wall and look up the hardware you will need. Remember, you can start small and expand later as your yoga studio grows.

### Router Template Needed for Installation

The template is used to exactly cut out the holes into 3/4" plywood for the Wall Plates. The template spaces the Wall Plates exactly 16" apart across the plywood. This exact spacing is necessary for use of the Wall Bar. There is a \$200.00 refundable deposit to use the template free for 3 weeks. Thereafter \$10.00 per week is charged until the template is returned.
